Homework 2

Do homework problems 3.60 and 3.63 from Bryant & O'Hallaron 3rd edition.

Submit your homework answers as a gzipped tarball containing your answers to each problem, in the files hw2/loop.c and hw2/switch.c respectively. The .c files should compile cleanly with shell commands like this:

gcc -O2 -Wall -Wextra -S hw2/loop.c

As we will grade your submission with the latest version of GCC installed in /usr/local/cs/bin/ on the newer SEASnet GNU/Linux servers, it would be wise to check your work on that platform. On this platform the shell command 'gcc --version' should output 'gcc (GCC) 6.2.0' or later.

To create your tarball, use the shell command:

tar -cf - hw2/loop.c hw2/switch.c |
   gzip -9 >hw2.tar.gz
